Git summary

First open git bash on desktop

Write a command (cd) or (dir) to know which directory you are in now

Then try to go to desktop by commands like:

cd onedrive

then

cd desktop

then clone the repo from github (which you have already created on github) by taking the link url from githup button

then write in git bash the following command :

git clone (url)

then a git file will be created on your desktop

put your project files in this file and then go to git bash and move to thiat file (directory)

cd (folder name)

then

cd add .

to add all the files in the directory to the github repo

then

cd commit –m "add the files"

then

git push
